

C7 from Eurex Clearing.
Innovative post-trade technology.

EC eurex clearing

Efficiency & flexibility from Europe's pioneering Clearing House.

Clearing is at the heart of the global financial markets and needs technology that's up to the task.

Always at the forefront of innovation, Eurex Clearing will again lead the way with C7 – a new clearing infrastructure developed by Deutsche Boerse Group.

C7 is designed to meet a changing regulatory environment, while at the same time bringing the scalability & flexibility needed to meet evolving product opportunities and high volume demand.

It's how we'll keep you clear to trade as your business evolves.

Advanced capabilities from C7.

Eurex Clearing's C7 will be rolled out in stages. When complete, the clearing architecture will feature some of the most advanced capabilities ever in the sector.

- Unique system design to support clearing of listed and OTC products (for both derivatives and cash) on one common architecture.
- Superior client clearing support for different business models based on EMIR compliant segregation models (Omnibus and Individual Segregation) under a configurable account structure.
- Shorter time-to-market for launching new products means your business can be more agile to capitalize on market opportunities and respond to changing regulatory demands.
- Streamlined transaction management will help you achieve the efficiencies that are crucial for your business.
- Market standard and low footprint interfaces simplify system integration.
- “Future-proofing” eliminates dependency on end-of-lifecycle technologies and makes it easier to plan ahead.
- By summer 2015, all listed derivatives products will be available for clearing through C7.

The C7 clearing architecture puts Eurex Clearing at the forefront in terms of technology and client services.

Since 1998, we have pioneered innovation in clearing technology, new approaches to risk management and client asset protection.

We were first to introduce both real-time risk calculation and real-time risk-data provision. Now our portfolio-based margining methodology – Eurex Clearing Prisma – sets a new industry standard for helping customers maximize collateral efficiency.

And our unique Individual Clearing Model can provide protection & portability that's shaped to your specific needs.

C7 is part of the 7 Market Technology series from Deutsche Börse Group. Alongside the T7 trading architecture, the series includes as well our high-speed global connectivity network N7.

For further information about our C7 clearing architecture, please visit www.eurexclearing.com/C7 or contact your local Eurex Clearing representative.

Eurex Clearing is one of the leading central counterparties globally – assuring the safety and integrity of markets while providing innovation in risk management, clearing technology and Client Asset Protection. We clear the broadest scope of products under a single framework in Europe – both listed products and OTC – and offer the world’s widest spectrum of eligible collateral.

Eurex Clearing serves more than 170 Clearing Members in 16 countries, managing a collateral pool of around 51 billion euros and processing gross risk valued at almost 15.7 trillion euros every month.
